

## 2-phase Stepping Driver

### DC24V/36V Unipolar type

(Applicable motor rated current 1.2A/phase, 2A/phase)

#### Micro-step (200 X 1~8 divisions)

(Smooth operation and low vibration even at low speeds.)

#### PMM-MD-23210-10 (Photo coupler input method)

#### PMM-MD-23211-10 (CMOS input method)

## Specifications of PM Driver

Item		Photo coupler input method			CMOS input method					
		PMM-MD-23210-10	PMM-MD-23220-21	PMM-MD-23220-10	PMM-MD-23211-10	PMM-MD-23221-21	PMM-MD-23221-10			
Basic specifications	Input source	Main power	DC24V/36V±10%			DC5V±5%				
		Control power	—			DC5V±5%				
	Getaway torque	Main power	2A	2A	3A	2A	2A			
		Control power	—			0.5A				
	Rated current		1A/phase	1.2A/phase	2A/phase	1A/phase	1.2A/phase			
	Operating ambient temperature		0~+50°C							
	Conservation temperature		-20~+70°C							
	Operating ambient humidity		35~85% RH (no condensation)							
Environment	Conservation humidity		10~90% RH (no condensation)							
	Vibration resistance		4.9m/s <sup>2</sup> Frequency range 10~55Hz, Direction: along X,Y and Z axes, for 2 hours each.							
	Impact resistance		Considering the NDS-C-0110 standard section 3.2.2 division "C", not influenced.							
	Withstand voltage		Not influenced when AC500V is applied between power input terminal and cabinet for one minute.							
	Insulation resistance		10MΩ MIN. when measured with DC500V megohmmeter between input terminal and cabinet.							
	Mass(Weight)		0.18kg(0.4lbs)							
	Applied Standards	UL Standards	UL508C							
		File No.	E179775							
Function	Selection, setting function		Pulse input mode selection– DIP switches enables selection of Pulse and direction and 2-input mode. Resolution setting– DIP switches enables 4 divisions ranging from 1~8 resolution. Power down -- External signal input enables to turn off the current that flows through the stepping motor. Automatic current down selection– Automatic current down function can be selected. Resolution selection-- External signal input enables to select 1 division (Full-step) and 2 divisions (Half-step) (Resolution selection function is only for photo coupler input method type)							
I/O signals	Signal Name (Brevity code)	Pin No. (CN1)								
		Photo coupler input method	CMOS input method							
	CW pulse Input signal (CW)	1 2	7	In the 2-input mode, inputs driving pulses to rotate in CW direction.						
				In the Pulse and direction mode, inputs driving pulse train to rotate the step motor rotation. Photo coupler input method, input resistance 330Ω CMOS input method Input signal voltage: H = 4.0 to 5.5V, L = 0 to 0.5V Input signal voltage: H = 4.0 to 5.5V, L = 0 to 0.5V Maximum input frequency:20kpulse/s Maximum input frequency:20kpulse/s.						
	(CK)									
	CCW pulse Input signal (CCW)	3 4	8	In the 2-input mode, inputs driving pulses to rotate in CCW direction.						
				In the Pulse and direction mode, inputs rotation direction signals to the stepping motor. Internal photo coupler ON (CMOS type: "H" level) -- CW direction Internal photo coupler OFF (CMOS type: "L" level)-- CCW direction. Photo coupler input method, input resistance 330Ω CMOS input method Input signal voltage: H = 4.0 to 5.5V, L = 0 to 0.5V Input signal voltage: H = 4.0 to 5.5V, L = 0 to 0.5V Maximum input frequency:20kpulse/s Maximum input frequency:20kpulse/s.						
	(U/D)									
	Power down input signal (PD)	5 6	9	Inputs PD signal to turn off the current that flows through the stepping motor. Internal photo coupler ON (CMOS type: "L" level input) -- Power down function is enabled. Photo coupler input method, input resistance 330Ω CMOS input method Input signal voltage: H = 4.0 to 5.5V, L = 0 to 0.5V Input signal voltage: H = 4.0 to 5.5V, L = 0 to 0.5V Maximum input frequency:20kpulse/s Maximum input frequency:20kpulse/s.						
	Step angle selection input (S. SEL)				By the input S or SEL signal, the step angle of full-step or half-step is selected. "H" level: -- Half-step "L" level -- Full-step CMOS input method					
					Input signal voltage: H = 4.0 to 5.5V, L = 0 to 0.5V					
	Phase origin monitor output signal (MON)	7 8	11	Indicates ON when the exciting phase is at the origin position. In the full-step, outputs once for every 4 pulses. In the half-step, outputs once for every 8 pulse From the photo coupler by the open collector output (ON at the phase origin). Output specification: Vceo=30V MAX. Ic=5mA MAX.						
				From the transistor by the open collector output (ON at the phase origin). Output specification: Vceo=30V MAX. Ic=5mA MAX.						

- Stepping motor rotation in the CW direction means clockwise rotation when facing the output shaft (the flange side) of the stepping motor. CCW direction means counterclockwise rotation when facing the same side.
- Set the DIP switch as follows when using the step angle selection function by signal input.

EX1	EX2	EX3
OFF	ON	ON

- When the half-step is selected by the step angle selection signal, its torque ought to be 70% of that for the full-step.

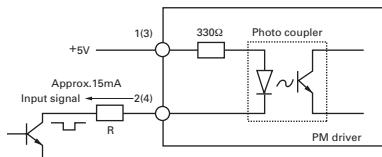

## Operation, Connection, and Function

PMM-MD-23210-10(Photo coupler input method)

PMM-MD-23220-21(Photo coupler input method)

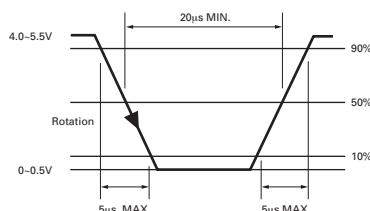

PMM-MD-23220-10(Photo coupler input method)

### ● Input circuit configuration (CW, CCW)

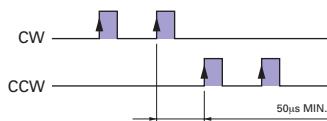

- Pulse duty 50% MAX.
- When the crest value of the input signal is 5V, the external limit resistance R must be  $0\Omega$ . When the crest value of the input signal exceeds 5V, use the external limit resistance R to limit the input current to approximately 15mA.

#### Input signal specifications

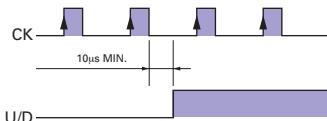

#### Timing of command pulse

- 2-input mode (CW, CCW)

- The internal photo coupler turns ON within the blue square and, at its rising edge to ON, the internal circuit (stepping motor) is activated.
- When applying the pulse to CW, turn OFF the CCW side internal photo coupler.
- When applying the pulse to CCW, turn OFF the CW side internal photo coupler.

- Pulse and direction mode (CK,U/D)

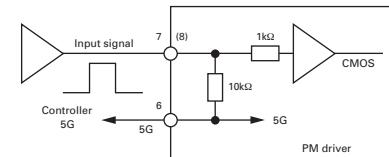

- The internal photo coupler turns ON within the blue square and, at the rising edge to ON of the CK photo coupler, the internal circuit (stepping motor) is activated.
- Switching the input signal U/D shall be performed while the internal photo coupler on the CK side is OFF.

PMM-MD-23211-10(CMOS input method)

PMM-MD-23221-21(CMOS input method)

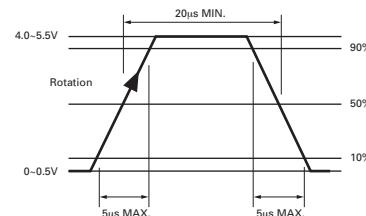

PMM-MD-23221-10(CMOS input method)

### ● Input circuit configuration (CW, CCW)

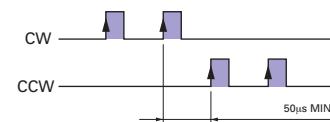

- Pulse duty 50% MAX.

#### Input signal specifications

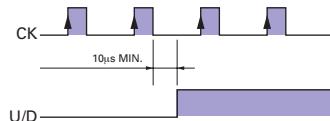

#### Timing of command pulse

- 2-input mode (CW, CCW)

- The "H" level is input at blue square and, at its rising edge to "H" level, the internal circuit (stepping motor) is activated.
- When applying the pulse to CW, turn OFF the CCW side internal photo coupler.
- When applying the pulse to CCW, turn OFF the CW side internal photo coupler.

- Pulse and direction mode (CK,U/D)

- The "H" level is input for blue square and, at its rising edge to "H" level, the internal circuit (stepping motor) is activated.
- Switching the input signal U/D should be performed while the input level on the CK side is "L".

#### 1 Function selection DIP switch pack --- All models in common

1	2	3	4	5
SL	F/R	EX1	EX2	EX3
ON	ON	OFF	ON	OFF
↑				
ON	ON	OFF	ON	OFF

- The factory setting is shown in the figure above.
- Turn off the power supply to the PM driver before changing DIP switch setting.

1 SL (Auto current down selection)  
Select Auto current down function selection.

SL	Auto current down
ON	Approx 50% of current rating when stopped
OFF	100% of current rating when stopped

- The temperature increase in the motor driver can be controlled by setting SL to On(approx.50% of the rated current).
- The output torque when SL is On(approx. 50% of the rated current) is approx.50% of the that when SL is Off (100% of the rated current).

2 F/R (Pulse-input method selection)  
Select the pulse-input method.

F/R	Pulse-input mode
ON	2-input mode (CW, CCW)
OFF	Pulse and direction mode (CK, U/D)

3 4 5 EX1, EX2, EX3 (Step angle setting selection)  
Enables selection of division numbers of basic step angles when micro step is driven.

EX1	EX2	EX3	Number of divisions
ON	ON	ON	1 (Full step)
OFF	ON	OFF	2 (Half step)
ON	OFF	OFF	4
OFF	OFF	OFF	8

#### 2 Operating-current adjustment controller (VR1) --- All models in common

The controller is to adjust operating-current of the stepping motor.

The factory setting is at the rated current of standard combined stepping motor.

#### 3 Connector (CN2) --- All models in common

Connects motor power line

#### 4 Connector (CN1A) --- Photo coupler input method

Connects I/O line

#### 5 Connector (CN3) --- Photo coupler input method

Connects DC power line

#### 6 Connector (CN1B) --- CMOS input method

Connect I/O line and DC power line

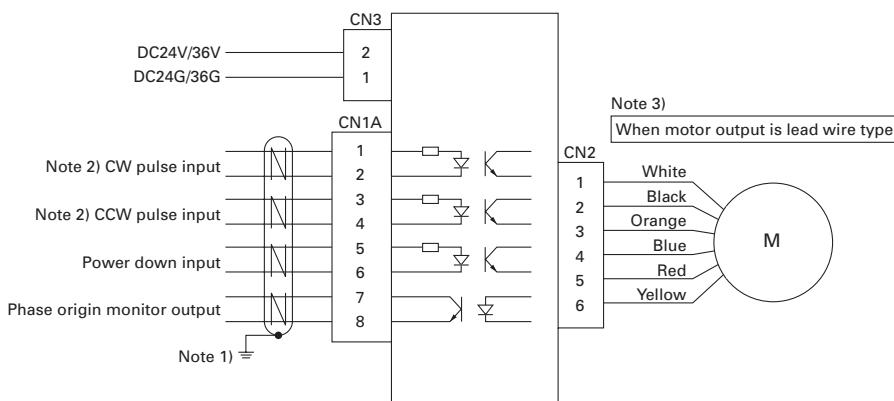

## Operation, Connection, and Function
